*Allowable Subject Matter*

I. The following is an examiner's statement of reasons for allowance:

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nimphius disclose an optimally flexible method and a corresponding communication network for offering announcements for the subscribers.

Granberg disclose a method of customized applications for mobile networks such as digital cellular radio telecommunications systems. More particularly, the present invention relates to an Advice of Charge (AoC) service for mobile telephone subscribers.

Wallenius disclose a method and system for distributing IN services to a mobile network such as the GSM (Global System for Mobile Communications) or GPRS (General Packet Radio Service) network or any packet data network.

Caloud et al. disclose a DELIVERY OF ANNOUNCEMENTS TO A USER OF A COMMUNICATIONS SYSTEM WHEN ROAMING IN A NETWORK AWAY FROM THE USER'S HOME NETWORK.

Gossman disclose a system and method of for exchanging information between a wireless network and an external system

Art Unit: 2683

Olsson et al. disclose a mobile telecommunications network and, in particular, to the transmission of short message service (SMS) messages using Intelligent Network (IN) services.

Vaniomaki et al. disclose a method and a service providing means for supporting services, to which a subscriber of a first telecommunication network has subscribed, in a second telecommunication network, when a mobile station roams from said first to said second telecommunication network.

Maxwell disclose a method and apparatus for sending and receiving text messages within a cellular communications network utilizing Subscriber Identity Module, Global System for Mobile communications and Short Message Service to enhance and supplement audio transmissions.

Therefore, all of the above prior art fails to disclose the method of facilitating service delivery to a first user registered with a home network for a particular service having an associated service accessible to a service subsystem of said home network in a communications system while the first user is roaming in a visited network of the communications system, comprising: initiating a connection between said first user and a second user registered with any network of said communications system, a subsystem of said visited network, sending an invocation of a service to said service subsystem of said home network, establishing call status data necessary for re-establishment of call state of said service subsystem, storing said call status data in a storage of said service subsystem, said service subsystem of said home network

Art Unit: 2683

instructing said subsystem of the visited network to set up a connection between the first user via said subsystem of the visited network to the service subsystem of the home network, setting up said connection, detecting, by the home network, the connection as a connection requiring Intelligent Network service, wherein the detecting includes calling a specific number, delivering the associated service to the first user via said connection, disconnecting the delivery of said associated service, and redirecting said connection from said first user to said second user.

Claims 2-17 are cancelled.

Claims 1, 18-35 is allowed.
